

Poison Dart Frog

By: Kaela

LIFE CYCLE

It starts as a tadpole and the mom frog carries the tadpoles on its back. It hatches from eggs and starts as a tadpole. Then becomes a frog and breathes with lungs. They eat lots of insects and crickets.

CHARACTERISTICS

They are vertebrates which means they have a back bones. They have small slippery bodies and they are quiet . They have poisonous skins and bright colors. Poison Dart Frogs get poison from the insects it eats. The insects eat poison plants. This poison helps protect the frog in his habitat. He is only one inch.

ENIRONMENT

Poison dart frogs live in northern South America and in the rainforests. also in moist spots.

MY ECO FRIENDLY HABITAT

My eco will have a lot of trees and plants. And lots of moist spots and hot Places. With water
